

# JC Engelbrecht

Web Developer

## Short Bio

I am a second-year student at University of Stellenbosch studying BSc Computer science. I completed a Software developer bootcamp hosted by a collaboration of HyperionDev and Stellenbosch university in February 2024.

I am well familiar with Microsoft word and Excel, as well as Python, R, HTML, CSS, Bootstrap and Django coding languages. My goal is to support anyone that needs me and to help them organize large amounts of data with complex algorithms as well making programs that are very user friendly for anyone to use. I am determined to complete my work before deadlines are met and will not let anyone down.

What I am looking for is any Software engineering or Data science career, preferably in a remote workspace, because I am a full-time student. However, I have great capabilities of catching up with university work if it means that I must attend a compulsory meeting or conference
